HTTP/1.1 302 Moved Temporarily Cache-Control: no-siteapp Connection: keep-alive Content-Length: 0 Date: Sat, 18 Apr 2015 20:08:55 GMT Location: Server: AkamaiGHost Essentially telling it to redirect to itself.. 12 6) and now it asks me to install legacy Java SE 6 runtime when trying to open my.. Select the Java Runtime Environment version 8u111 for Mac OS X as shown below I just did a software update (MacOS Sierra version 10.. The problem appears to be that the page is set to redirect to itself Using the plugin for Chrome shows the following code being returned by the server.

However, if you need the latest version of Java (e.g., for Android development) you can download it from Oracle's Java Download Page.

java se 6 runtime high sierra

java se 6 runtime high sierra, legacy java se 6 runtime sierra, java se 6 runtime sierra, java runtime high sierra, java runtime macos high sierra, java runtime mac sierra, java runtime environment mac sierra, java runtime environment high sierra

Not sure though whether this is a problem on Apple's server or Akamai's. A bunch of their download pages seem to be broken right now.

java se 6 runtime sierra

java runtime macos high sierra
